Tyson Foods, Inc. - Forests 2021

F0. Introduction

F0.1

(F0.1) Give a general description of and introduction to your organization.

Tyson Foods Inc. (NYSE: TSN) is one of the world’s largest food companies and a recognized leader in protein. Founded in 1935 by John W. Tyson and grown under three generations of family leadership, the company has a broad portfolio of products and brands like Tyson®, Jimmy Dean®, Hillshire Farm®, Ball Park®, Wright®, Aidells®, IBP® and State Fair®. Tyson Foods innovates continually to make protein more sustainable, tailor food for everywhere it’s available and raise the world’s expectations for how much good food can do. Headquartered in Springdale, Arkansas, the company had 139,000 team members at October 3, 2020. Through its Core Values, Tyson Foods strives to operate with integrity, create value for its shareholders, customers, communities and team members and serve as a steward of the animals, land and environment entrusted to it.

Please note: the reporting period end date was changed from 9/28/19 to 10/1/2020 to comply with CDP’s ORS requirement of providing a start date that is 364-367 days before the end date. However, Tyson Foods’ fiscal year is was 9/29/2019 to 10/3/2020.

F0.5

(F0.5) Are there any parts of your direct operations or supply chain that are not included in your disclosure?

Yes

F0.5a
### F1. Current state

#### F1.1

(F1.1) How does your organization produce, use or sell your disclosed commodity(ies)?

**Timber products**

- **Activity**
  - Distributing/packaging

- **Form of commodity**
  - Primary packaging

- **Source**
  - Contracted suppliers (manufacturers)

- **Country/Area of origin**
  - Australia
  - Brazil
  - Canada
  - Chile
  - China
  - Italy
  - Malaysia
  - Philippines
  - Republic of Korea
  - United States of America
  - Unknown origin

**% of procurement spend**

1-5%

**Comment**

Our cost of goods sold in FY2020 was $37,801 million. In FY2020, our procurement of timber for use in our distribution and packaging material was approximately 1-5% percent of our cost of goods sold.

<table>
<thead>
<tr>
<th>Value chain stage</th>
<th>Exclusion</th>
<th>Description of exclusion</th>
<th>Potential for forests-related risk</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Direct operations</td>
<td>Other, please specify (Ingredients with fractions and derivatives of palm oil)</td>
<td>For this disclosure we are excluding information related to palm oil fractions and derivatives contained in ingredients we procure from our supply partners. We will evaluate this in the future.</td>
<td>Potential for forests-related risk evaluated, but not disclosing to CDP</td>
<td>International acquisitions in FY 2019 prompted the company to reassess forest risk. Tyson Foods selected Proforest to assess forest risk for direct and indirect sourcing of cattle and beef; palm oil (direct and embedded); soy (direct and embedded); and pulp, paper and packaging. The assessment concluded nearly 94 percent of Tyson Food's land footprint was at no to low risk of deforestation. Further, the risk assessment concluded deforestation risk was attributed to procurement by the company's international operations. As a result of this assessment, Tyson Foods established its Forest Protection Standard. As Tyson Foods identifies unknown sourcing origins for these key commodities, the company anticipates its deforestation risk will be less than six percent. In FY 2021, Tyson Foods started the process of developing commodity action plans to better understand fractions and derivatives in their direct operations and supply chain for palm oil and soy.</td>
</tr>

In 2019, Tyson Foods engaged Proforest, an independent organization focused on sustainability in the forest and agricultural sectors and implementation of responsible sourcing practices, to conduct a deforestation risk assessment across our global agriculture supply chain. The assessment focused on commodities such as cattle, palm oil, soy, timber, and pulp/paper & packaging. Risk was categorized largely at the country-level as low, high or unknown. As part of the risk assessment the sourcing origins for cattle products were identified where available, and we traced 0.06% to Argentina. However, traceability was not readily available in all instances as indicated by the 0.36% that is classified as unknown. This risk assessment identified that Tyson’s deforestation risk is largely attributable to procurement in our international operations.

**Forest risk commodity**
Cattle products

**Impact driver type**
Reputational and markets

**Primary impact driver**
Availability of certified sustainable material

**Primary impact**
Constraint to growth

**Description of impact**
Tyson Foods recognizes the need for sustainable beef, however, availability of sustainable beef and definitive guidelines on what that entails are limited, which could constrain our growth and potentially impact Tyson Foods substantively. Tyson Foods has developed a Forest Protection Standard to proactively addresses deforestation risks.

**Primary response**
Establishment of new no-deforestation/no-conversion commitments

**Total financial impact**

**Description of response**
The expansion of our international footprint in recent years has resulted in the need to reassess the risk of deforestation across our operations and supply chain. That’s why, in October 2019, we engaged PROFOREST to help conduct a deforestation risk assessment across our global agricultural supply chain, focusing on four commodities —cattle and beef; palm oil; soy; and pulp, paper and packaging. The assessment concluded that 94% of our land footprint is at no-to-low risk of being associated with deforestation. Of the remaining 6%, approximately 3% is at medium-to-high risk, and the sourcing origin could not be identified for the other 3%. The charts at left illustrate the risk by commodity. To proactively address the 6% at risk, we developed and publicly released a Forest Protection Standard, which outlines steps we will take to continue minimizing deforestation risk and protect the forests in the geographies where we source. These steps include: • Developing and implementing specific Commodity Action Plans detailing the work required in each of our four commodity areas to support deforestation-free sourcing. • Establishing and communicating supply partner expectations for fulfilling the requirements of our Forest Protection Standard by the timelines embedded in each Commodity Action Plan. • Working with our suppliers to determine the source origin of the unknown volumes identified in the risk assessment.

---

**Forest risk commodity**
Soy

**Impact driver type**
Reputational and markets

**Primary impact driver**
Increased cost of certified sustainable material

**Primary impact**
Increased production costs

**Description of impact**
Tyson Foods recognizes the need for sustainable sourcing and strives to minimize its environmental footprint through investments in sustainable soy, palm oil and timber. Tyson Foods has developed a Forest Protection Standard to proactively addresses deforestation risks. The increased production costs for sustainable sourcing of products has not impacted Tyson Foods substantively at this time.

**Primary response**
Establishment of new no-deforestation/no-conversion commitments

**Total financial impact**

That's why, in October 2019, we engaged PROFOREST to help conduct a deforestation risk assessment across our global agricultural supply chain, focusing on four commodities—cattle and beef; palm oil; soy; and pulp, paper and packaging. The assessment concluded that 94% of our land footprint is at no-to-low risk of being associated with deforestation. Of the remaining 6%, approximately 3% is at medium-to-high risk, and the sourcing origin could not be identified for the other 3%. The charts at left illustrate the risk by commodity. To proactively address the 6% at risk, we developed and publicly released a Forest Protection Standard, which outlines steps we will take to continue minimizing deforestation risk and protect the forests in the geographies where we source. These steps include: • Developing and implementing specific Commodity Action Plans detailing the work required in each of our four commodity areas to support deforestation-free sourcing. • Establishing and communicating supply partner expectations for fulfilling the requirements of our Forest Protection Standard by the timelines embedded in each Commodity Action Plan. • Working with our suppliers to determine the source origin of the unknown volumes identified in the risk assessment.

Please explain
We initially assessed the risk of deforestation in our supply chain in 2017 and found low to no risk. Due to the international growth of our business, we decided to reassess in 2019. Tyson Foods engaged Proforest, an independent organization focused on sustainability in the forest and agricultural sectors and implementation of responsible sourcing practices, to conduct a deforestation risk assessment across our global agriculture supply chain. The findings of this assessment revealed that the overwhelming majority – more than 95% - of Tyson's beef/cattle and direct soy sourcing is at low risk for deforestation as it is of U.S. origin. Most of our pulp, paper & packaging procurement assessed is identified as low risk due to having Sustainable Forestry Initiative (SFI) certifications or being of U.S. origin. Direct palm oil volumes, while dramatically smaller than the other commodities analyzed, are likely sourced from jurisdictions at risk for deforestation. Finally, further work on embedded soy and embedded palm (i.e., when soy, palm or their derivatives are a direct ingredient in products we procure) will occur in the near future. The output of this work will inform the development of a Tyson Foods Forest Protection Policy.

F2.1b

(F2.1b) Which of the following issues are considered in your organization's forests-related risk assessment(s)?
Availability of forest risk commodities

Relevance & inclusion
Relevant, always included

Please explain
In FY 2017, Tyson Foods collaborated with an environmental non-government organization (NGO) to assess potential key forest-risk commodities the company sourced (beef, palm, and soy). The assessment determined the regions where the forest-risk commodities were sourced had no to low risk for deforestation. International acquisitions in FY 2019 prompted the company to reassess forest risk. Tyson Foods selected Proforest to assess forest risk for direct and indirect sourcing of cattle and beef; palm oil (direct and embedded); soy (direct and embedded); and pulp, paper and packaging. The assessment concluded nearly 94 percent of Tyson Food's land footprint was at no to low risk of deforestation. Further, the risk assessment concluded deforestation risk was attributed to procurement by the company's international operations. As a result of this assessment, Tyson Foods established our Forest Protection Standard. As Tyson Foods identifies unknown sourcing origins for these key commodities, the company anticipates its deforestation risk will be less than six percent. The assessment did not identify availability risks related to deforestation for the cattle and soy we source for our U.S. operations and we have used this information internally to inform our decision making around this issue. We do recognize, however, that other factors such as weather patterns throughout the world, outbreaks of disease, the global level of supply inventories and demand for grains and other feed ingredients, as well as agricultural and energy policies of domestic and foreign governments could impact the availability of raw materials such as cattle and soy. In FY 2021, we have started the process of developing commodity action plans to better understand fractions and derivatives in our direct operations and supply chain for palm oil and soy.

Quality of forest risk commodities

As a result of this assessment, Tyson Foods established our Forest Protection Standard. As Tyson Foods identifies unknown sourcing origins for these key commodities, the company anticipates its deforestation risk will be less than six percent. The assessment did include various environmental considerations (e.g., biodiversity, conversion, GHG, and water scarcity and pollution) cattle and soy we source for our U.S. operations. This information has aided us in our decision making around this issue. While the assessment noted no to low forest risks for the cattle and soy we source, we have an approved science-based target for GHG reductions and a forthcoming context-based water target that will be inclusive of our supply chain. In FY 2021, we have started the process of developing commodity action plans to better understand fractions and derivatives in our direct operations and supply chain for palm oil and soy.

As a result of this assessment, Tyson Foods established our Forest Protection Standard. As Tyson Foods identifies unknown sourcing origins for these key commodities, the company anticipates its deforestation risk will be less than six percent. This information has aided us in our decision making around this issue. We recognize, that new or more stringent domestic and international government regulations could impose material costs on us and could adversely affect our business. Additionally, increased government regulations to limit carbon dioxide and other greenhouse gas emissions as a result of concern over climate change may result in increased compliance costs, capital expenditures and other financial obligations for us or could affect our ability to procure needed commodities at costs and in quantities we currently experience. In FY 2021, we have started the process of developing commodity action plans to better understand fractions and derivatives in our direct operations and supply chain for palm oil and soy.
Loss of markets

Relevance & inclusion

International acquisitions in FY 2019 prompted the company to reassess forest risk. Tyson Foods collaborated with an environmental non-government organization (NGO) to assess potential key forest-risk commodities the company sourced (beef, palm, and soy). The assessment determined the regions where the forest-risk commodities were sourced had no to low risk for deforestation. International acquisitions in FY 2019 prompted the company to reassess forest risk. Tyson Foods selected Proforest to assess forest risk for direct and indirect sourcing of cattle and beef; palm oil (direct and embedded); soy (direct and embedded); and pulp, paper, and packaging. The assessment concluded nearly 94 percent of Tyson Food's land footprint was at no to low risk of deforestation. Further, the risk assessment concluded deforestation risk was attributed to procurement by the company's international operations. As a result of this assessment, Tyson Foods established our Forest Protection Standard. Within this Forest Protection Policy, Tyson Foods seeks supply partners who share the company's goal to protect forests and other natural ecosystems. We are targeting the reduction of deforestation risk in its global supply chain. Accordingly, the company will work to source from suppliers demonstrating adherence by the target dates included in this Forest Protection Standard and the related commodity action plans (CAPs). Tyson expects its suppliers to meet the following for prevention of deforestation: • No supply from areas of deforestation (as referenced in this Standard) from the cutoff date specified for the applicable commodity. • Work within credible forest protection frameworks. • For countries and jurisdictions of concern, provide traceability to farm or plantation of origin such as certification, geospatial or other supply chain mapping, and blockchain. • Adhere to Tyson Foods, Inc. Supplier Code of Conduct, which sets supplier expectations in the areas of labor and human rights, health and safety, the environment and ethical business practices. • Meet AFI Core Principle 2, Respect for Human Rights. Tyson recognizes not all suppliers will be able to meet these new requirements immediately; however, Tyson expects suppliers to make the changes necessary to meet the requirements by the target sourcing dates. Suppliers who do not adhere to these expectations will be evaluated and encouraged to put programs in place that align with Tyson’s goals and targets on deforestation. In addition, a transition period will be established for any subsequent business acquisitions to ensure adherence within a defined timeframe.

Brand damage related to forest risk commodities

Our 2017 materiality assessment included numerous environmental topics; however, other regulatory were not asked to provide their perspectives and feedback on this specific assessment. International acquisitions in FY 2019 prompted the company to reassess forest risk. Tyson Foods selected Proforest to assess forest risk for direct and indirect sourcing of cattle and beef; palm oil (direct and embedded); soy (direct and embedded); and pulp, paper and packaging. The assessment concluded nearly 94 percent of Tyson Food’s land footprint was at no to low risk of deforestation. Further, the risk assessment concluded deforestation risk was attributed to procurement by the company’s international operations. As a result of this assessment, Tyson Foods established our Forest Protection Standard. As Tyson Foods identifies unknown sourcing origins for these key commodities, the company anticipates its deforestation risk will be less than six percent. In FY 2021, we have started the process of developing commodity action plans to better understand fractions and derivatives in our direct operations and supply chain for palm oil and soy.

Suppliers

Relevance & inclusion
Relevant, always included

Please explain
To raise the world’s expectations for how much good food can do, we maintain open dialogue and communication with a wide range of stakeholders. These include, but are not limited to, employees, investors, customers, supply partners, non-government organizations, communities, and regulators. We recognize internal and external stakeholder engagement can help better define our business strategy; sharpen our decision-making; and enhance our company’s economic, environmental, and social performance. Accordingly, we (1) seek to understand the perspectives and needs of our stakeholders, (2) set expectations for areas of mutual concern, (3) act upon these expectations, and (4) ensure our stakeholders remain informed of our progress. Our 2017 materiality assessment included numerous environmental topics; however, other regulatory were not asked to provide their perspectives and feedback on this specific assessment. International acquisitions in FY 2019 prompted the company to reassess forest risk. Tyson Foods selected Proforest to assess forest risk for direct and indirect sourcing of cattle and beef; palm oil (direct and embedded); soy (direct and embedded); and pulp, paper and packaging. F3.1a

(F3.1a) How does your organization define substantive financial or strategic impact on your business?

Tyson Foods, Inc. does not have a comprehensive definition of “substantive impact,” though, as a publicly-traded company, Tyson Foods, Inc. is subject to various regulatory and contractual standards related to the measurement, reporting, and disclosure of impacts to the company’s business. Many of these standards are financial- and/or risk-based and are publicly available. We are committed to sourcing from responsibly managed forest resources, and acknowledge that changes in weather patterns throughout the world, disease outbreaks, and natural disasters could impact the health or growth of livestock and other commodity inputs and therefore affect the availability of raw materials such as cattle and soy. The expansion of our international footprint in recent years has resulted in the need to reassess the risk of deforestation across our operations and supply chain. That’s why, in October 2019, we engaged PROFOREST to help conduct a deforestation risk assessment across our global agricultural supply chain, focusing on four commodities—cattle and beef; palm oil; soy; and pulp, paper and packaging.

The assessment concluded that 94% of our land footprint is at no-to-low risk of being associated with deforestation.

To proactively address the 6% at risk, we developed and publicly released a Forest Protection Standard, which outlines steps we will take to continue minimizing deforestation risk and protect the forests in the geographies where we source. These steps include:

- Developing and implementing specific Commodity Action Plans detailing the work required in each of our four commodity areas to support deforestation-free sourcing.
- Establishing and communicating supply partner expectations for fulfilling the requirements of our Forest Protection Standard by the timelines embedded in each Commodity Action Plan.
- Working with our suppliers to determine the source origin of the unknown volumes identified in the risk assessment.

F3.1b

(F3.1b) For your disclosed forest risk commodity(ies), provide details of risks identified with the potential to have a substantive financial or strategic impact on your business, and your response to those risks.

Where in your value chain does the risk driver occur?

Direct operation

Primary risk driver

Increased stakeholder concern or negative stakeholder feedback

Primary potential impact

Disruption to sales

Company-specific description

The loss of one or more of our largest customers could have a negative impact. Our business could suffer significant setbacks in sales and operating income if our customers’ plans and/or markets change significantly or if we lose one or more of our largest customers, including, for example, Walmart Inc., which accounted for 18.7% of our sales in fiscal 2020. Failure to maintain favorable consumer perception of our brands and products could negatively impact our business. The food industry in general is subject to changing consumer trends, demands and preferences. Trends within the food industry change often, and failure to identify and react to changes in these trends could lead to, among other things, reduced demand and price reductions for our brands and products. We strive to respond to consumer preferences and social expectations, but we may not be successful in our efforts. We could be adversely affected if consumers lose confidence in the safety and quality of certain food products or ingredients, or the food safety system generally. Prolonged negative perceptions concerning the health implications of certain food products or ingredients or loss of confidence in the food safety system generally could influence consumer preferences and acceptance of some of our products and marketing programs. Continued negative perceptions and failure to satisfy consumer preferences could materially and adversely affect our product sales, financial condition and results of operations.

Explanation of financial
Financial impact is unknown at this time.

Primary response to risk
Promotion of best practice and awareness

Description of response
Tyson Foods ensures our business is not impacted by negative stakeholder concerns through our sustainable sourcing and business practices. For example, we implemented a cattle grazing commitment, BEEFCARE™ - which uses verified beef producers who are committed to raising cattle using practices that positively impact the land and animals, and also want to promote it. BEEFCARE is a third-party sustainability verification program for cattle ranchers. The program uses third-party audits to verify that farmers and ranchers are using best practices in caring for animals, the environment, and the people and communities who support them. Additionally, we implemented our Forest Protection Standard as we recognize the need to protect forests and biodiversity, reduce our climate footprint, and conserve natural resources.

Where in your value chain does the risk driver occur?
Direct operation

Primary risk driver
Increased commodity prices

Primary potential impact
Increased production costs

Company-specific description
Fluctuations in commodity prices and in the availability of raw materials, especially feed grains, live cattle, live swine and other inputs could negatively impact our earnings. Our results of operations and financial condition, as well as the selling prices for our products, are dependent upon the cost and supply of commodities and raw materials such as beef, pork, poultry, corn, soybean meal, packaging materials and energy and, to a lesser extent, cheese, fruit, seasoning blends, flour, corn syrup, corn oils, butter and sugar. Corn, soybean meal and other feed ingredients, for instance, represented roughly 53% of our cost of growing a live chicken in fiscal 2020.

Primary response to risk
Engagement with suppliers
**Description of response**

The goal of Tyson Foods’ Local Grain Services program is to build strong and lasting relationships with the farmers who sell their grain to us. With our mission to keep local grain local and a farmers’ commitment to provide the best grain possible, together we’ll help feed the world. Additionally, By utilizing local services, there is a lower risk of interference with supplied raw materials. Additionally, we are members of the Roundtable for Sustainable Soy (RTRS), to ensure responsible sourcing practices. Through this membership, we purchase credits for soybean meal used to feed chickens in our supply chain in global regions that may source from high-risk areas. Our commodity purchasing group purchases RTRS-certified soy credits; these credits ensure responsibly raised soy verified by the Roundtable for Sustainable Soy (RTRS).

Supply chain
Primary forests-related opportunity

Increased supply chain transparency

Company-specific description & strategy to realize opportunity

Tyson recognizes that we could increase our supply chain transparency to better identify our sourcing. International acquisitions in FY 2019 prompted the company to reassess forest risk. Tyson Food selected Proforest to assess forest risk for direct and indirect sourcing of cattle and beef; palm oil (direct and embedded); soy (direct and embedded); and pulp, paper and packaging. The assessment concluded nearly 94 percent of Tyson Food’s land footprint was at no to low risk of deforestation. Further, the risk assessment concluded deforestation risk was attributed to procurement by the company’s international operations. Additionally, we identified the majority – more than 95 percent – of the company’s cattle and beef and direct soy sourcing was at low risk for deforestation due to the scale of and U.S. sourcing for domestic operations. We have begun sourcing verified deforestation free beef with a target sourcing date of the end of calendar year 2021, with complete transition of our Australasia sourcing by December 31, 2025 and sourcing from Latin America by December 31, 2028.

<td>Protecting forest resources aligns with our purpose – raising the world’s expectations for how much good food can do. Tyson Foods has sourced commodities with potential risk related to deforestation in certain global jurisdictions. Accordingly, Tyson Foods recognizes the need to protect forests and biodiversity, reduce our carbon footprint, and conserve natural resources. As a result, we have developed our Forest Protection Standard. This Standard complements the company’s Science Based Targets Initiative (SBTi) accepted target to reduce greenhouse gas emissions 30 percent by 2030. Additionally, Tyson Foods Forest Protection Standard aligns with three United Nations Sustainable Development Goals including Goal12 - Responsible Consumption and Production; Goal 13 - Climate Action; and Goal 15 - Life on Land. Moreover, Tyson aspires to align this Standard with the Accountability Framework Initiative (AFI). Tyson Foods plans to report progress on an annual basis. Responsibility for implementing this Standard resides with the procurement teams responsible for sourcing the listed commodities. Support and guidance will be provided by Tyson Foods’ Corporate Sustainability Team and Chief Sustainability Officer. This Standard shall be implemented in a manner consistent with the AFI guidelines by establishing and maintaining a plan to address the following: • Clear, credible and up-to-date CAPs to address identified risks and support progress against this Standard. • Annual goals, objectives and targets for measuring and improving performance. • Regular monitoring of progress, including annual review by senior management. • Traceability across direct and indirect supply chains as necessary. • A system to monitor and address supplier alignment with this Standard. • Maintain a risk management process to 1) track deforestation trends and developments; 2) identify other materials in the company’s supply chain posing deforestation risk; and 3) monitor existing and developing countries and jurisdictions at risk for deforestation. • Transparent reporting on progress through the annual Sustainability Report and other means. • Partnerships with industry, government, academia and NGOs on efforts to protect forests and other natural ecosystems.</td>

As we grow and expand our operations internationally, we recognize there is potential for deforestation forest-related risks associated with our direct operations and supply chain. To provide a case study, in support of our goals in 2018 we joined the UN Global Compact and identified ways we are taking action on the Sustainable Development Goals in support of our long term business objectives. Specifically, we have found alignment with SDG 12 and 13 to help set our strategy. In October 2019, we engaged PROFOREST to help conduct a deforestation risk assessment across our global agricultural supply chain, focusing on four commodities—cattle and beef, palm oil, soy, and pulp, paper and packaging. The assessment concluded that 94% of our land footprint is at no-to-low risk of being associated with deforestation. To proactively address the 6% at risk, we developed and publicly released a Forest Protection Standard, which outlines steps we will take to continue minimizing deforestation risk and protect the forests in the geographies where we source, which would factor into our business objectives.

</tbody>
</table>

For our purchases of soybeans in the U.S., we have full system coverage because we can track our soybean purchases back to the original crushing facilities. All beans are grown in the U.S. However, at this time, we do not have insight into the domestic region a specific soybean was grown. Crushing facilities often buy their soybeans locally, but if local production is maxed out, they may have to source from other regions of the country. Additionally, crushers may not be willing or likely able to share the location where the soybean was actually produced. We face the same challenges with respect to our soy buys outside the U.S. and our procurement of ingredients containing soy and soy embedded in meat we buy.

---

**F6.2a**
(F6.2a) Provide details on the level of traceability your organization has for its disclosed commodity(ies).

(F6.2b) Why do you not have system(s) in place to track and monitor the origin of your disclosed commodity(ies) and what are your plans to develop these in the future?

**Forest risk commodity**

**Primary reason**

We are planning to track and monitor the origin of forest risk commodities within the next two years

**Please explain**

Tyson Foods maintains an approved supplier list. We expect our strategy for implementation will be that we will be leveraging our Supplier Code of Conduct processes as well as FSQ and Procurement processes to gather information on source of origin indicators and documentation to combat deforestation and/or other sustainable or responsible sourcing.

Please explain
Tyson is a [founding member] (since 2008) of the environmentally focused non-government organization, the Leather Working Group (LWG), that works to advance traceability back to hide facilities for their 400+ members, which include leather manufacturers, suppliers and brands. The LWG has separately audited Tyson's tanneries in Amarillo, Texas; Dakota City, Nebraska; Finney County, Kansas; and Joslin, Illinois. Tyson has received and maintained the organization's Gold Medal Award since 2008 in Amarillo, Texas; 2010 in Dakota City, Nebraska; 2011 in Garden City, Kansas; and in the last year (2018) in Joslin, Illinois. The LWG auditing protocol requires us to meet a stringent set of environmental controls in our tanneries, including the evaluation of energy use, water use and effluent treatment. While it is primarily an environmental audit, certified tanneries are expected to demonstrate reputable practices in all areas of business. For instance, the latest version will evaluate worker and equipment safety in our tannery operations moving forward. In addition, Tyson has been an active participant of the organization's leadership, holding a seat on the LWG board of the executive committee for three consecutive years.

Is this certified by more than one scheme?
No

Please explain
In fiscal year 2017, we finalized a collaboration with an environmentally focused non-government organization to assess potential social and environmental risks with key forest-risk commodities we source. The assessment determined the regions from which we source the forest-risk commodities are at no to low risk for deforestation. We became the first beef processor to license the Progressive Beef™ program, a comprehensive quality management system designed for cattle feeding operations that sell to companies like Tyson Foods' Progressive Beef covers all aspects of day-to-day cattle care. Cattle feeding operators certified in the program follow best practices for animal welfare, food safety, responsible antibiotic use and environmental sustainability. All of these practices are verified twice per year through USDA-approved auditors. Each audit is like a report card, and the metrics involved help ranchers improve their operations. We achieved our goal to buy 2 million program cattle in 2019. Our future goal is to grow this to 50 percent of all the cattle we source after three years.

(F6.10) Do you participate in external activities and/or initiatives to promote the implementation of your forests-related policies and commitments?

**Forest risk commodity**

**Cattle products**

Do you participate in activities/initiatives?

Yes

Activities

Involved in multi-partnership or stakeholder initiatives

**Initiatives**

UN Global Compact

Other, please specify (U.S. Roundtable for Sustainable Beef (USRSB) & Proforest)

**Jurisdictional approaches**

<Not Applicable>

Please explain

In addition to being members of the Global Roundtable for Sustainable Beef, we are also a founding member of and actively engaged with the U.S Roundtable for Sustainable Beef (USRSB). The U.S Roundtable for Sustainable Beef (USRSB) is a multi-stakeholder initiative developed to advance, support and communicate continuous improvement in the sustainability of the U.S. beef value chain. The U.S Roundtable for Sustainable Beef (USRSB) achieves this through leadership, innovation, multi-stakeholder engagement, and collaboration. The U.S Roundtable for Sustainable Beef (USRSB) encourages and promotes continuous improvement in the U.S. beef value chain through several actions, including identifying sustainability indicators; establishing verification methodologies; generating field project data to test sustainability concepts; providing a forum for open discussion, information exchange and program development; and offering stakeholders an equal opportunity through membership participation. We have employees serving as our representative on the Roundtable that are actively engaged in identifying, setting, and testing standards, metrics, and indicators associated with the sustainable production of beef. Additionally, in October 2019, Tyson Foods engaged Proforest, an independent organization focused on sustainability in the forest and agricultural sectors and implementation of responsible sourcing practices. The purpose of the engagement was to help the company assess and identify potential deforestation risks in the company’s global sourcing origins relative to cattle, palm oil, soy, timber, pulp and paper. The assessment concluded nearly 94 percent of Tyson’s land footprint was at no to low risk of deforestation. The output of this work informed the development of Tyson Foods’ Forest Protection Standard, which has been shared with NGOs, customers and other relevant stakeholders. As a result of the assessment and Forest Protection Standard, we are developing commodity action plans for cattle products, timber products, soy, and palm. These action plans will be finalized in FY 2021 and specifically address target/goals associated with sustainable sourcing of each commodity.

Please explain
To further our participation in external initiatives, in 2018, we joined the UN Global Compact to further the implementation of responsible consumption and production. In 2019, we became a member of the Roundtable for Responsible Soy (RTRS). As a member of the Roundtable for Responsible Soy (RTRS), we purchase credits for soybean meal used to feed chickens in our supply chain in global regions that may source from high-risk areas. Our commodity purchasing group purchases RTRS-certified soy credits; these credits ensure responsibly raised soy verified by the Roundtable for Responsible Soy (RTRS). In October 2019, Tyson Foods engaged Proforest, an independent organization focused on sustainability in the forest and agricultural sectors and implementation of responsible sourcing practices. The purpose of the engagement was to help the company assess and identify potential deforestation risks in the company’s global sourcing origins relative to cattle, palm oil, soy, timber, pulp and paper. The assessment concluded nearly 94 percent of Tyson’s land footprint was at no to low risk of deforestation. As a result of the assessment and Forest Protection Standard, we are developing commodity action plans for cattle products, timber products, soy, and palm. These action plans will be finalized in FY 2021 and specifically address targets/goals associated with sustainable sourcing of each commodity. The Tyson Foods Packaging Development group is a member of two significant sustainability organizations: the American Institute for Packaging and the Environment (AMERIPEN) and the Sustainable Packaging Coalition® (SPC®). AMERIPEN is a leading North American packaging advisory group and gives us insight and participation into legislative initiatives around packaging materials and formats. SPC® is a membership-based collaborative that provides a platform to discuss, partner and engage in packaging technologies, materials and specification developments. SPC® also possesses a comprehensive training and on-package communication tool, How-2-Recycle, that Tyson Foods and our customers are adopting for improved sustainability education aimed toward our customers and consumers. Though we are approaching the theoretical maximum use of post-consumer recycled (PCR) and post-industrial recycled (PIR) content possible in our corrugated packaging, while maintaining product integrity requirements, we continue to innovate ways both types of content can be used. In 2020, total recycled content was 37.5% of packaging, with 29.3% PCR content and 8.2% PIR content.
F6.11

Other ecosystem restoration

Primary motivation
Voluntary

Description of project
Tyson Foods defines land stewardship as the application of environmental and conservation best practices focused on soil health, water quality and conservation, nutrient stewardship, and wildlife habitat. Our goal is to support improved environmental practices on 2 million acres of row crop corn by the end of 2020. This represents enough corn to feed all of Tyson Foods’ annual broiler chicken production in the U.S., as well as some of the pigs and cattle the company buys from independent farmers and ranchers. With our partners at Environmental Defense Fund and Farmers Business Network, we provide technical and agronomic assistance to help improve row crop corn yield, with a goal of maximizing positive environmental outcomes. This also helps farmers meet increasing consumer demand for more sustainably grown food. We enrolled 419,000 acres of farmland in the first year of the program and reported baseline data on nutrient use efficiency and tillage practices in our FY2019 sustainability report. Our pilot with MyFarms faced challenges in collecting the necessary farm-level data and has therefore been discontinued, thus removing 11,000 acres from the pilot. Data from years 2019 and 2020 are illustrated in the charts to the right. Challenges with the MyFarms pilot and interruptions related to the COVID-19 global pandemic hindered our ability to scale our land stewardship work in 2020. Given those setbacks, we are reassessing our options and developing a plan to fulfill our 2 million acre target.

Please explain
The United States Department of Agriculture reported 54% of crop land was rented in 2014, as compared to 67% in the FBN pilot. Tyson Foods will collaborate with Environmental Defense Fund, FBN and other supply chain partners to identify and support public policies that encourage the adoption of conservation practices on rented land. As farmers implement increasingly efficient land and nutrient management practices, the effects can be felt throughout the supply chain. We hope to see, through optimized nutrient management, less demand for fertilizer, resulting in less energy used to produce the fertilizer. But, more importantly, there will be less fertilizer lost per acre, resulting in reduced GHG emissions from farmland. Improved land stewardship also positively impacts farmers’ livelihoods, helping them avoid purchasing more fertilizer than necessary and increasing the health and resilience of their fields for years to come.

F7. Verification

F7.1

(F7.1) Do you verify any forests information reported in your CDP disclosure?
No, but we are actively considering verifying in the next two years
F8. Barriers and challenges

F8.1
